These closing remarks may sound somewhat tinged with paranoia, but theorists who are not used to working with a variety of tools are to be expected to be hostile to a work that threatens their claims to be going about 'economic science' in the right way. So if I succeed in opening the minds of at least a few neoclassical economists, instead of merely satisfying fellow deviants, I shall be well pleased, for even this would come as something of a surprise. But, then, life is full of surprises.
